Moving the limits

We are offering standardized products and special-purpose machines for hightech sectors such as the automotive, solar and electrical engineering industries guarantee top performance, increased flexibility, higher output and maximum efficiency. And we now have our own manufacturing facility and sales office in the India.

Axle assembly

Our sister concern AUE the premier supplier of axle assembly systems to all passenger and commercial vehicle manufacturers worldwide. Our systems provide flexible solutions to automated and manual tasks and optimize productivity with unequaled quality.

These specialized system for Axle Adjustment and alignment will be available locally through us. Modern chassis are technical masterpieces.

Individually tuned to the vehicle type and imbedded into the vehicle electronics, they form the basis for safety and perfect roadability.

Increasing complexity demands equally precisely tuned measurement and alignment technology for track, camber, coasting (including axial run-out) and ABS checks.

The wide range of variants demands the highest possible level of flexibility.

Rear axle assembly and components for rear assembly

Assembly and test engineering

Our customized turn key solutions cover everything from manual workstations to highly automated manufacturing plants. Integrating inspection systems for parameters such as: pressure, torque, temperature, friction, oscillation, dimensional control and cleanliness ensure that quality objectives are met.

Highlights

- Gradual extension of capacity due to modular setup
- Integrated workpiece carrier station
- Alternative loading and unloading in magazines or blisters
- Measurement and evaluation of voltages in the mV - range
- Measurement and evaluation of currents in the μ A - range

Highly flexible AGV system

Assembly and testing line

Cleaning technology

When it comes to cleaning technology, Strama-Summit is the leading manufacturer of machines and plants for "targeted" cleaning with aqueous media. In addition to compact rotary tables up to eight processes

(OrbitClean®) and linear, modular concepts with maximum flexibility. (ProMoClean®), Strama-Summit also offers robot solutions (RoboClean®) to clean complex geometries.

Service

After production start-up our highly trained engineers and service technicians stand ready to support you with any production or performance concerns. Our phone and teleservice hotline is able to provide instant help. If a service technician is required on location we will ensure the fastest possible response time.

In addition to servicing our own machine and systems we also provide contract services for other suppliers.

We are ready to provide economical solutions to all your needs in:

- upgrading
- refurbishing
- redesigning

various components

Application

- Automotive
- Continuous production lines
- Intermediate assembly line automation

Fixture and guage manufacturing (body in white)

Our experience with fixture making ranges from simple customer-specific prototype fixtures to sophisticated production fixtures to stretch, position, fix or guide workpieces. Upon request we take charge of everything

from building the customized plant to creating the production control system after it has been installed and commissioned.
